SURE GRIP HAND CONTROL

- SURE GRIP is a highly innovative hand control system designed specifically for comfort, precision, and safety.
- Unlike the older versions of hand controls, SURE GRIP's revolutionary push/rock system puts the operating handle in a vertical position; ease back to accelerate... push forward to brake. This unique rocking motion allows full-range braking and acceleration with minimal hand travel.
- The smooth, black, powder coated finish complements all vehicle interiors and makes SURE GRIP easy to grip and clean.
- SURE GRIP is known for having the easiest gas in the industry today thus, allowing for hours of fatigue free driving. The push rock style will give you the driving experience you have been longing for.

ADDITIONAL DRIVER BENEFITS

- The SURE GRIP operating system requires much less effort to apply gas and maintain speed
- Offering a style of driving that can be perfected by virtually anyone in need of a hand control
- SURE GRIP allows your hand to rest in a neutral position during operation, reducing muscle fatigue
- Vertical design allows you to reach high speeds without having the hand control bump your legs
- Due to the patented vertical design, added room exists for non-users to operate the foot pedals
- The vertical handle allows for a more natural arm position giving you the comfort you deserve
- A 4-year guarantee is offered on all SURE GRIP Hand Controls

WHO USES SURE GRIP?...

Anybody with physical disabilities who wants precision, control, smooth operation and safe driving. In fact, 75% of people exposed to all types of hand control systems choose SURE GRIP. Our drivers include paraplegics, quadriplegics, people with cerebral palsy, ataxia, multiple sclerosis and spina bifida, as well as people with limited hand dexterity, and traumatic injuries such as forearm fractures and burns.
